Our Services

Telehealth

Our telehealth services virtually connects patients with U.S. Board-Certified Medical Providers specializing in non-emergency care.*

“Telehealth is utilized for 13% to 17% of U.S. patient visits across all specialties.” - McKinsey & Company

Telepharmacy Lite

Allows your patients to talk to a pharmacist immediately, regardless of location, thanks to our live-video counseling.**

- Manage Remotely
- Verify Prescriptions
- Remote Patient Monitoring

“93% of patients report that they would use telemedicine to manage prescriptions” - Medical Economics, 2020

*Average call back time for providers is <4 hours

**Participating iCare+ pharmacists can earn a one-time remuneration fee up to \$15 per 5-minute encounter, rules of participation apply

Home Test Kits

Our partners use CLIA-Certified and CAP Accredited labs.

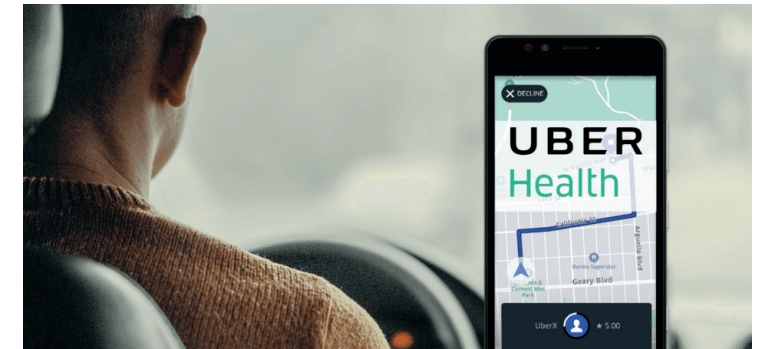

Patients and providers can access lab results directly from inside telemedicine application.

Patient data will be available for pharmacists or patient providers to assist in analyzing their result.

*Kit types can vary, activation rules apply

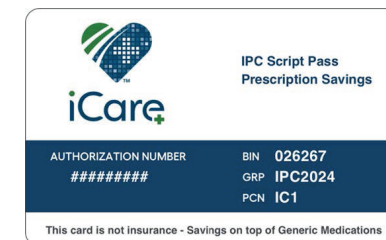

Patient Transportation

- Arrange rides classified as, medically necessary so patients can make it to their critical healthcare appointment.
- Uber Health is fully integrated with our iCare+ mobile app and desktop solution.
- Trip, driver, and vehicle details are communicated to the patient by text or phone call.

ScriptPass

Patients can save a significant amount of money on select generic prescription medications with iCare+ Script Pass.

*This program has been customized exclusive to NDC's distributed through IPC.

About Us

Digital Health powered by IPC is an integrated virtual healthcare company that delivers member value added services through a profitable online, easy-to-use, and end-to-end virtual healthcare solution.

iCare+ patients receive access to affordable care provided by board-certified and licensed providers through a video conferencing software.

Patients are offered many benefits such as, use of a diverse set of health care tools to treat acute illnesses, monitor chronic conditions, purchase, and receive home health kits and remote lab-diagnostic services.
